EXECUTIVE SUMMARY

This report analyzes the end-to-end performance of our marketing funnel, evaluating 10,000 top-of-funnel visitors to trace their journey through to final customer acquisition. Overall, the marketing engine is profitable, generating $374,732 in revenue from $272,614 in ad spend, yielding an Overall ROAS of 1.37x and a healthy LTV:CAC ratio of 3.11x.

However, the overall Visitor-to-Customer conversion rate sits at just 0.79%. The analysis reveals a stark contrast in channel efficiency and a major bottleneck at the top of the funnel. By reallocating budget away from underperforming channels (Google Ads) and optimizing the mobile user experience, we can significantly reduce our average Cost Per Acquisition (CPA) from $3,450 and scale our most profitable campaigns.

KEY FINDINGS & INSIGHTS

- The Top-of-Funnel Bottleneck (Funnel Analysis): The most critical drop-off point occurs immediately at the first step. Only 16.33% of Visitors convert into Leads (Stage 1 to Stage 2). Once users become Leads, the survival rate stabilizes drastically (44.7% convert to MQL, and 40.1% convert to SQL).
- The "Golden Goose" vs. The "Money Pit" (Channel Efficiency): * LinkedIn is our most lucrative channel. It boasts the highest conversion rate (1.39%), the lowest CPA ($1,973), and an outstanding ROAS of 2.61x.
    - Conversely, Google Ads is severely underperforming, pulling in a negative ROAS (0.87x) with a sky-high CPA of $4,905.
- Mobile Traffic is Bleeding Conversions (Device Analysis): Despite driving roughly 33% of all traffic (3,258 visitors), mobile users convert at a dismal 0.55%, compared to Tablet (0.97%) and Desktop (0.83%).
- Empty Clicks in Brand Campaigns (Campaign Quality): The *Brand_Awareness_2025* campaign successfully drives high traffic volume but brings in the lowest quality leads, converting at just 0.35%. Meanwhile, educational and urgency-driven campaigns like *Webinar_Series_Tech* and *Flash_Sale_Feb* drive the highest volume of actual Customers and SQLs.

RECOMMENDATIONS & STRATEGIC MOVES

Move 1: Immediate Budget Reallocation (The 20% Shift)

- Action: Shift 20% of the ad spend currently allocated to Google Ads and Direct channels over to LinkedIn and Referral/Affiliate programs.
- Impact: Since LinkedIn acquires customers at less than half the cost of Google Ads, this immediate shift will lower the blended CPA and push the overall ROAS closer to 2.0x without requiring additional budget.

Move 2: Emergency Mobile UX Audit

- Action: Instruct the web development and UX teams to conduct a friction audit on the mobile landing pages and checkout flows.
- Impact: Mobile users are showing interest by clicking the ads, but dropping off on the site. Fixing mobile responsiveness to match Desktop conversion rates would instantly yield a ~30% increase in total customers.

Move 3: Fix the Stage 1 "Lead Capture" Offer

- Action: Because 83% of visitors bounce without leaving their information, we must improve our Top-of-Funnel (ToFu) lead magnets. Implement lower-friction signup forms (e.g., "Sign up with Google/LinkedIn" buttons) and gate high-value content (like the successful Tech Webinars) behind an email capture wall.

Move 4: Restructure the "Brand Awareness" Strategy

- Action: Stop expecting immediate bottom-of-funnel conversions from the *Brand_Awareness_2025* campaign. Instead, tag these visitors with a retargeting pixel and funnel them into the highly successful *Retargeting_Q1* or *Webinar_Series_Tech* campaigns to nurture them over a longer time horizon.
